- The structure of salbutamol, a drug used to treat bronchospasms, is given below.

Give the molecular formula of salbutamol.

**C<sub>13</sub>H<sub>21</sub>O<sub>3</sub>N**

Calculate the  $m/z$  value for the major peak you would expect to see for the molecular ion in the high resolution mass spectrum.

[Atomic masses:  $^1\text{H} = 1.0078$ ;  $^{12}\text{C} = 12.0000$ ;  $^{16}\text{O} = 15.9949$ ;  $^{14}\text{N} = 14.0031$ ]

**The molar mass of C<sub>13</sub>H<sub>21</sub>O<sub>3</sub>N is**

$$13 \times 12.0000 \text{ (C)} + 21 \times 1.0078 \text{ (H)} + 3 \times 15.9949 \text{ (O)} + 1 \times 14.0031 \text{ (N)}$$

Answer: **239.1516**

Give the structure(s) of the major organic products formed when salbutamol is treated with the following reagents.

cold HCl (1 M)

NaOH (1 M)

Cr<sub>2</sub>O<sub>7</sub><sup>2-</sup> / H<sup>+</sup>
