Marks 6

• A galvanic cell consists of a  $Cr^{3+}/Cr$  half-cell with unknown  $[Cr^{3+}]$  and a Ni<sup>2+</sup>/Ni halfcell with  $[Ni^{2+}] = 1.20$  M. The electromotive force of the cell at 25 °C was measured to be 0.55 V. What is the concentration of  $Cr^{3+}$  in the  $Cr^{3+}/Cr$  half-cell? From the standard reduction potentials,  $\operatorname{Cr}^{3+}(\operatorname{aq}) + 3e^{-} \rightarrow \operatorname{Cr}(s)$  $\operatorname{Ni}^{2+}(\operatorname{aq}) + 2e^{-} \rightarrow \operatorname{Ni}(s)$  $E^{0} = -0.74 \text{ V}$  $E^{0} = -0.24 \text{ V}$ The most negative is reversed to give an overall reaction and cell potential of  $3Ni^{2+}(aq) + 2Cr(s) \rightarrow 3Ni(s) + 2Cr^{3+}(aq)$   $E^{0} = (+0.74 - 0.24) V = 0.50 V$ From the Nernst equation for this 6 electron reaction,  $E = E^{\circ} - \frac{RT}{nF} \ln Q = E^{\circ} - \frac{RT}{nF} \ln \frac{[Cr^{3+}(aq)]^2}{[Ni^{2+}(aq)]^3}$  $= (0.50 \text{ V}) - \frac{(8.314 \text{ J K}^{-1} \text{ mol}^{-1})(298 \text{ K})}{6 \times 96485 \text{ mol}^{-1}} \ln \frac{[\text{Cr}^{3+}(\text{aq})]^2}{(120)^3}$ Solving this gives,  $[Cr^{3+}(aq)] = 3.8 \times 10^{-3} M$ Answer:  $3.8 \times 10^{-3}$  M Calculate the equilibrium constant of the reaction at 25 °C. The equilibrium constant is related to the standard cell potential through:  $E^{\circ} = \frac{RT}{mE} \ln K$ Using  $E^{0} = +0.50$  V,  $0.50 \text{ V} = \frac{(8.314 \text{ J K}^{-1} \text{ mol}^{-1})(298 \text{ K})}{6 \times 96485 \text{ mol}^{-1}} \ln K$ 

Solving this gives:

 $K = 5.5 \times 10^{50}$ 

Answer:  $5.5 \times 10^{50}$ 

## ANSWER CONTINUES ON THE NEXT PAGE

Calculate the standard Gibbs free energy of the reaction at 25 °C.

The Gibbs free energy change is related to the standard cell potential through:

 $\Delta G^{\circ} = -nFE^{\circ}$ = - 6 × (96485 mol<sup>-1</sup>) × (0.50 V) = -290 kJ mol<sup>-1</sup>

Answer: -290 kJ mol<sup>-1</sup>

Express the overall reaction in the shorthand voltaic cell notation.

 $\operatorname{Cr}(s) | \operatorname{Cr}^{3+}(aq) || \operatorname{Ni}^{2+}(aq) | \operatorname{Ni}(s)$
