## Work through the ChemCAL modules "Weak Acids and Bases",

 "Calculations With Weak Acids And Bases" and "Acid-Base Titrations".1. In a titration experiment, 50.0 mL of 0.100 M acetic acid $\left(\mathrm{p} K_{\mathrm{a}}=4.76\right)$ is reacted with NaOH .
(a) Calculate the pH when the following quantities of 0.100 M NaOH have been added:
(i) 0.0 mL (initial pH )
(ii) 25.0 mL
(iii) 45.0 mL
(iv) 50.0 mL
(v) 55.0 mL
(vi) 75.0 mL
(b) Using the calculated values, plot the pH curve for the titration.
(c) Compare your curve with that obtained for Q4 on Sheet 7.
2. The pH of a 0.6 M solution of a weak acid is 4.0 . What percentage of the acid has ionised?
3. The $\mathrm{p} K_{\mathrm{a}}$ of acetic acid is 4.76. Calculate the pH of the following solutions:
(a) 0.2 M acetic acid
(b) 0.2 M sodium acetate
(c) A buffer that is 0.2 M in acetic acid and 0.2 M in sodium acetate
4. What volumes of 0.200 M solutions of $\mathrm{HNO}_{2}$ and $\mathrm{KNO}_{2}$ are required to make 1.00 L of a buffer solution of pH 3.00 ? ( $K_{\mathrm{a}}$ for $\mathrm{HNO}_{2}=4.00 \times 10^{-4} \mathrm{M}$ )
5. Give the chemical equations and state whether the final solutions are acidic, neutral or basic when the following are dissolved in water.
(a) $\mathrm{Na}_{2} \mathrm{O}$
(b) $\quad \mathrm{Cl}_{2} \mathrm{O}_{7}$
