

**Topics in the June 2010 Exam Paper for CHEM1101**

Click on the links for resources on each topic.

2010-J-2:

- [Filling Energy Levels in Atoms Larger than Hydrogen](#)
- [Nuclear and Radiation Chemistry](#)

2010-J-3:

- [Shape of Atomic Orbitals and Quantum Numbers](#)

2010-J-4:

- [Bonding - MO theory \(polar bonds\)](#)
- [Ionic Bonding](#)
- [Periodic Table and the Periodic Trends](#)
- [Wave Theory of Electrons and Resulting Atomic Energy Levels](#)

2010-J-5:

- [Band Theory - MO in Solids](#)
- [Liquid Crystals](#)
- [Ionic Bonding](#)

2010-J-6:

- [Bonding - MO theory \(H<sub>2</sub>\)](#)
- [Bonding - MO theory \(larger molecules\)](#)

2010-J-7:

- [Nuclear and Radiation Chemistry](#)

2010-J-8:

2010-J-9:

- [Thermochemistry](#)
- [First and Second Law of Thermodynamics](#)

2010-J-10:

- [Chemical Equilibrium](#)
- [Equilibrium and Thermochemistry in Industrial Processes](#)

2010-J-11:

- [Chemical Equilibrium](#)

2010-J-12:

- [Electrochemistry](#)

2010-J-13:

- [Batteries and Corrosion](#)

2010-J-14:

- [Types of Intermolecular Forces](#)

2010-J-15:

- Gas Laws
- Nitrogen in the Atmosphere
- Thermochemistry

2205(a)

# THE UNIVERSITY OF SYDNEY

## CHEMISTRY 1A - CHEM1101

**CONFIDENTIAL**

### FIRST SEMESTER EXAMINATION

**JUNE 2010**

**TIME ALLOWED: THREE HOURS**

GIVE THE FOLLOWING INFORMATION IN BLOCK LETTERS

<b>FAMILY NAME</b>		<b>SID NUMBER</b>	
<b>OTHER NAMES</b>		<b>TABLE NUMBER</b>	

#### INSTRUCTIONS TO CANDIDATES

- All questions are to be attempted. There are 24 pages of examinable material.
- Complete the written section of the examination paper in **INK**.
- Read each question carefully. Report the appropriate answer and show all relevant working in the space provided.
- The total score for this paper is 100. The possible score per page is shown in the adjacent tables.
- Each new short answer question begins with a •.
- Only non-programmable, University-approved calculators may be used.
- Students are warned that credit may not be given, even for a correct answer, where there is insufficient evidence of the working required to obtain the solution.
- Numerical values required for any question, standard electrode reduction potentials, a Periodic Table and some useful formulas may be found on the separate data sheets.
- Pages 19, 23 and 28 are for rough working only.

#### OFFICIAL USE ONLY

##### **Multiple choice section**

- 
- Consider the values of the electronic energy levels of an He atom. State which interactions would be expected to increase the energies of the electrons and which would decrease them.

**Marks**  
**3**

- Radon gas decays into polonium with a half-life of 3.82 days via the following mechanism:

Give three reasons why  ${}_{86}^{222}\text{Rn}$  is biologically a very harmful nuclide.

**3**

**THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY**

- Sketch the wavefunction of the  $3s$  atomic orbital as described below. Clearly mark all nodes and the relative sign (+ or -) of the wavefunction.

**Marks**  
**6**

a) using lobe representations

b) by plotting wavefunction *versus* distance from the nucleus

Explain the significance of (a) the lobes, (b) the nodes and (c) the sign of the wavefunction, in terms of the probability of finding an electron at a given point in space relative to the nucleus.

- The alkali hydrides are compounds of Group 1 metals with hydrogen in a 1:1 stoichiometry. Selected properties of the elements that make up these compounds are given in the following table.

Element	First Ionisation Energy ( $\text{kJ mol}^{-1}$ )	Electron Affinity ( $\text{kJ mol}^{-1}$ )	Electronegativity (scale 0-4)
H	1314	-79	2.20
Li	526	-66	0.98
Na	502	-59	0.93
K	425	-55	0.82
Rb	409	-53	0.82
Cs	382	-52	0.79

Is CsH more or less ionic than LiH? Justify your answer with calculations of their partial ionic character.

Explain the trend in the first ionisation energy of these elements.

**Marks**  
**4**

- 
- In terms of their electronic origins, briefly explain the concept of allotropes. Use two of the allotropes of carbon as examples.

**Marks**  
**2**

- Describe the nature of an ionic bond in terms of atomic and molecular orbitals.

**2**

- In order to predict if it is possible to form the  $\text{He}_2^+$  cation, complete the following steps.

In the boxes below, draw an energy level diagram showing labelled electron orbitals and their occupancies for the two reacting species, He and  $\text{He}^+$ .

In the other box below, draw an energy level diagram showing labelled electron orbitals and their occupancies in a postulated  $\text{He}_2^+$  molecule. Use the same energy scale.

Draw the lobe representation of the two occupied molecular orbitals in this molecule. Show all nuclei and nodal surfaces.

--	--

What is the bond order of this molecular ion?

--

Make a prediction about the stability of  $\text{He}_2^+$  in comparison to the  $\text{H}_2$  molecule.

--

**Marks**  
**6**

- Consider the process of electron capture by the manganese-54 isotope.

Write a balanced nuclear formula.

**Marks**

**3**

Explain why the wavelengths of the emitted X-rays after this process are identical to those of the peak X-ray fluorescence emissions obtained during bombardment of Cr by high energy electrons.

**THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY**

- Draw a plausible Lewis structures for isocyanic acid, HNCO.

**Marks**  
**6**

--

What are the NC and CO bond orders?

NC:

CO:

How many lone pairs are on the nitrogen?

Using the VSEPR model, what do you predict the H-N-C and N-C-O bond angles to be?

H-N-C:

N-C-O:

Draw two plausible Lewis structures for nitrous oxide, N<sub>2</sub>O. (Connectivity: N-N-O)

--

Assuming these two resonance structures contribute equally, what are the NN and NO bond orders?

NN:

NO:

How many lone pairs are on the central nitrogen?

Using the VSEPR model, what do you predict the N-N-O bond angle to be?

Draw two plausible Lewis structures for the N<sub>2</sub>O<sup>2-</sup> ion. (Connectivity: N-N-O)

--

Assuming these two resonance structures contribute equally, what are the NN and NO bond orders?

NN:

NO:

How many lone pairs are on the central nitrogen?

Using the VSEPR model, what do you predict the N-N-O bond angle to be?

--

- Ethane  $C_2H_6$  can be burnt in the presence of an excess of oxygen to give  $CO_2(g)$  and  $H_2O(l)$  or under restricted oxygen conditions to give  $CO(g)$  and  $H_2O(l)$ . A balanced equation for the first process is

Write a balanced equation for the combustion under restricted oxygen where  $CO(g)$  rather than  $CO_2(g)$  is produced.

**Marks****4**

Using the heats of formation, calculate the difference (in kJ per mole of ethane) in heat released by the two different types of combustion of ethane, *i.e.* combustion with excess  $O_2$  and combustion under restricted  $O_2$  conditions.

Compound	$\Delta_f H^\circ$ (kJ mol $^{-1}$ )
$H_2O(l)$	-285.9
$C_2H_6(g)$	-84.67
$CO_2(g)$	-393.5
$CO(g)$	-110.5

Answer:

- Ammonia,  $\text{NH}_3(\text{g})$ , has a standard Gibbs free energy of formation equal to  $-16.4 \text{ kJ mol}^{-1}$ . Consider the following reaction at 298 K.

In which direction will this reaction proceed if a mixture of gases is made with:  
 $P_{\text{NH}_3} = 1.00 \text{ atm}$      $P_{\text{H}_2} = 0.50 \text{ atm}$      $P_{\text{N}_2} = 0.50 \text{ atm}$

**Marks**  
**6**

Answer:

What pressure of hydrogen gas should be added to a mixture already containing 0.20 atm  $\text{NH}_3$  and 0.50 atm  $\text{N}_2$  so that the amounts of  $\text{NH}_3$  and  $\text{N}_2$  will not change?

Answer:

- Determine the value of the equilibrium constant (at 298 K) for the following reaction.

Substance	$\Delta_f H^\circ / \text{kJ mol}^{-1}$	$S^\circ / \text{J K}^{-1} \text{mol}^{-1}$
$\text{H}_2\text{CO}_3(\text{aq})$	-700.	187
$\text{H}_2\text{O}(\text{l})$	-286	70.
$\text{CO}_2(\text{g})$	-394	214

**Marks**  
**3**

Answer:

- Consider the following equilibrium.

If a 10.00 L vessel contains 2.50 mol  $\text{CO}(\text{g})$ , 2.50 mol  $\text{H}_2\text{O}(\text{g})$ , 5.00 mol  $\text{CO}_2(\text{g})$  and 5.00 mol  $\text{H}_2(\text{g})$  at 588 K, what are the concentrations of all species at equilibrium?

**2**

[CO] =

[H<sub>2</sub>O] =

[CO<sub>2</sub>] =

[H<sub>2</sub>] =

- Hydrogen peroxide,  $\text{H}_2\text{O}_2$ , can decompose to water and oxygen. Using the following redox potentials, determine whether this decomposition reaction is spontaneous or not.

**Marks**  
**2**

**THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY**

- The net reaction discharging the lead acid storage battery is:

What reaction occurs at the cathode?

What reaction occurs at the anode?

Why are the cathode and anode not in separate compartments, as in the Cu/Zn battery?

How does  $\text{H}_2\text{SO}_4$  serve as the 'salt bridge'? Which ions flow in which direction to maintain electroneutrality?

What is the formula for the equilibrium constant for the discharge reaction above?

The cell potential for this battery is 2.05 V. If the concentration of the  $\text{H}_2\text{SO}_4$  is 4.5 M, what is the standard potential of the cell at 25 °C?

Answer:

**Marks**

**7**

- Rationalise the order of the boiling points of the following liquids in terms of their intermolecular forces.

**Marks**  
**4**

liquid	F <sub>2</sub>	HCl	HBr	HI	Cl <sub>2</sub>	HF	Br <sub>2</sub>	I <sub>2</sub>
b.p. (° C)	-188	-85	-67	-35	-34	20	59	184

**THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY**

- You would like to make a gas thermometer using a mole of  $N_2$  at 1 atm. Assuming that you can treat the gas as ideal, determine how much the volume increases (in mL) per degree  $^{\circ}C$ .

**Marks**  
**2**

Answer:

- Most of the solar radiation is arriving at the Earth's surface in the form of visible light. Explain, briefly, why the principal contributions to the Greenhouse Effect come from gases that do not absorb in the visible but, instead, in the infrared frequencies.

**2**

- Consider two blocks of steel: block A is 1.00 kg and block B is 600. g. Both blocks start from the same temperature and are heated so that 600. J flows into each of the blocks in the form of heat. What is the final difference in temperature,  $T_A - T_B$ , between block A and block B. The specific heat of steel is  $0.460 \text{ J g}^{-1} \text{ K}^{-1}$ . Show all working.

**2**

Answer:

**CHEM1101 - CHEMISTRY 1A****DATA SHEET***Physical constants*Avogadro constant,  $N_A = 6.022 \times 10^{23} \text{ mol}^{-1}$ Faraday constant,  $F = 96485 \text{ C mol}^{-1}$ Planck constant,  $h = 6.626 \times 10^{-34} \text{ J s}$ Speed of light in vacuum,  $c = 2.998 \times 10^8 \text{ m s}^{-1}$ Rydberg constant,  $E_R = 2.18 \times 10^{-18} \text{ J}$ Boltzmann constant,  $k_B = 1.381 \times 10^{-23} \text{ J K}^{-1}$ Permittivity of a vacuum,  $\epsilon_0 = 8.854 \times 10^{-12} \text{ C}^2 \text{ J}^{-1} \text{ m}^{-1}$ Gas constant,  $R = 8.314 \text{ J K}^{-1} \text{ mol}^{-1}$
