2208(a)

THE UNIVERSITY OF SYDNEY

<u>CHEMISTRY 1B - CHEM1102</u> <u>SECOND SEMESTER EXAMINATION</u>

CONFIDENTIAL

NOVEMBER 2013

TIME ALLOWED: THREE HOURS

GIVE THE FOLLOWING INFORMATION IN BLOCK LETTERS

FAMILY NAME	SID NUMBER	
OTHER NAMES	TABLE NUMBER	

INSTRUCTIONS TO CANDIDATES

- All questions are to be attemp ted. There are 21 pages of examinable material.
- Complete the written section of the examination paper in <u>INK</u>.
- Read each question carefully. Report the appropriate answer and show all relevant working in the space provided.
- The total score for this paper is 100. The possible score per page is shown in the adjacent tables.
- Each new question of the short answer section begins with a •.
- Only non-programmable, Universityapproved calculators may be used.
- Students are warned that credit may not be given, even for a correct answer, where there is insufficient evidence of the working required to obtain the solution.
- Numerical values required for any question, standard electrode reduction potentials, a Periodic Table and some useful formulas may be found on the separate data sheets.
- Pages 11 and 24 are for rough working only.

OFFICIAL USE ONLY

Multiple choice section

• The p <i>K</i> _a of formic acid, HCO ₂ H, is 3.77. formic acid?	What is the pH of a 0.20 M solution of	Marks 7
	pH =	_
Give the equation for the reaction of form	nic acid with solid sodium hydroxide.	
Calculate the ratio of formate ion / formi	c acid required to give a buffer of pH 4.00.	_
	Answer:	
What amount (in mol) of sodium hydroxi		_
$0.20 \text{ M HCO}_2\text{H to prepare a solution buf}$		
		_
	Answer:	

[CoCl(NH₃)₅]SO₄

 $K_4[Fe(CN)_6]$

 $[Ag(CN)_2]^-$

 • Give the equation for the dissolution of hydroxyapatite, Ca₅(PO₄)₃(OH), in water.
 Marks 2

 What is the formula for the solubility product constant for hydroxyapatite?
 6

 • Complete the following table.
 6

 Formula
 Geometry of complex
 Ligand donor atom(s)

 [Zn(OH)₄]²⁻
 6

Select any complex ion from the above table and state whether it is paramagnetic, diamagnetic or neither. Explain your reasoning.

• A phase diagram of a pure compound has a triple point at 13 °C and 205 mmHg, a normal melting point at 17 °C, and a normal boiling point at 87 °C. Draw a phase diagram for this compound. Label all the different regions of the phase diagram.		
Indicate whether each of the following statements regarding this compound false.	ind is true or	
The density of the solid is greater than that of the liquid.	True / False	
If the pressure is reduced from 835 mmHg to 85 mmHg at a constant temperature of 11 °C, sublimation occurs.	True / False	
At a constant pressure of 835 mmHg, evaporation occurs if the temperature is raised from 13 °C to 81 °C.	True / False	

THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY.

 Which of the following complexes is/are chiral? Explain your reasoning. Use diagrams where necessary. acetylacetonate ion = CH₃COCHCOCH₃⁻ ethylenediamine = NH₂CH₂CH₂NH₂ 	Marks 3
tris(acetylacetonato)chromium(III)	
<i>trans</i> -bis(ethylenediamine)difluoridochromium(III) chloride	
acetylacetonatobis(ethylenediamine)chromium(III) iodide	

• What is the solubility of Cu(OH) ₂ in mol L ⁻¹ ? K_{sp} (Cu(OH) ₂) is 1.6×10^{-19} at 25 °C.	Mark 7
Answer:	_
The overall formation constant for $[Cu(NH_3)_4]^{2+}$ is 1.0×10^{13} . Write the equation for the reaction of Cu ²⁺ ions with excess ammonia solution.	
Calculate the value of the equilibrium constant for the following reaction.	
$Cu(OH)_2(s) + 4NH_3(aq) \implies [Cu(NH_3)_4]^{2+}(aq) + 2OH^{-}(aq)$	
	-
Answer:	-
Would you expect Cu(OH) ₂ (s) to dissolve in 1 M NH ₃ solution? Briefly explain your answer.	

• The following data were obtained for the iodide-catalysed decomposition of hydrogen peroxide, H₂O₂.

Experiment	[I ⁻](M)	[H ₂ O ₂] (M)	Initial rate(M s ⁻¹)
1	0.375	0	0
2	0.375	0.235	0.000324
3	0.375	0.470	0.000657
4	0.375	0.705	0.001024
5	0.375	0.940	0.001487
6	0	0.948	0
7	0.050	0.948	0.00045
8	0.100	0.948	0.00095
9	0.150	0.948	0.00140
10	0.200	0.948	0.00193

Determine the rate law from these data.

Use the data from Experiment 10 to calculate the rate constant for this reaction.

k =

Iodide ion is used as a catalyst in this reaction. What is the role of a catalyst in a chemical reaction?

• Complete the following table.			
STARTING MATERIAL	REAGENTS/ CONDITIONS	CONSTITUTIONAL FORMULA(S) OF MAJOR ORGANIC PRODUCT(S)	
		ОН	
	HI		
Br	hot conc. KOH in ethanol		
	$\operatorname{Cr_2O_7}^{2\Theta}/\operatorname{H}^{\oplus}$		
ОН		CI O	-
MgBr	1. CO ₂ 2. H [⊕] / H ₂ O		

Page Total:

Marks • Show clearly the reagents you would use to carry out the following chemical conversion. More than one step is required. Give the structures of any intermediate 7 compounds formed. 0 Ο O O ЮH Br

Marks • Devise a way to convert alkene **C** to alkene **D** using hydrogen bromide (HBr) as one 4 of the reagents. Provide any other reagents you might need. If any of the steps you use could form two products, explain whether there is any selectivity and why. D С

Page Total:

THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY.

•	Hydrogen chloride, HCl, reacts with the compound $CH_3CH=C=O$ in an electrophilic addition reaction. Use your knowledge of the mechanism of electrophilic addition to a C=C double bond to predict the major product of this reaction. Explain your reasoning.	Marks 2

THE REMAINDER OF THIS PAGE IS FOR ROUGH WORKING ONLY.
